Longfellow's Greenhouses

Miss Molly Butterfly Bush

Buddleia 'Miss Molly'

Height: 5 feet

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 5

Other Names: Summer Lilac

Description:

A valuable compact garden plant with spectacular hot pink and red spikes of flowers in summer; attracts butterflies; may treat as a perennial and cut it back to the ground each spring as it regrows vigorously and blooms on new wood

Ornamental Features

Miss Molly Butterfly Bush features showy panicles of fragrant hot pink flowers at the ends of the branches from mid summer to mid fall. The flowers are excellent for cutting. It has grayish green deciduous foliage. The fuzzy narrow leaves do not develop any appreciable fall color.

Landscape Attributes

Miss Molly Butterfly Bush is a multi-stemmed deciduous shrub with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Miss Molly Butterfly Bush is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Miss Molly Butterfly Bush will grow to be about 5 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
