Longfellow's Greenhouses

Fire Spinner Ice Plant

Delosperma 'Fire Spinner'

Height: 2 inches

Spread: 18 inches

Sunlight: ○

Hardiness Zone: 4

Description:

Low growing carpet-like, succulent, native to South Africa but amazingly hardy in North America; dazzling orange-red daisy-like flowers with a bright purple ring; perfect for xeriscapes, rock gardens, screes and sandy soils

Ornamental Features

Fire Spinner Ice Plant features showy red daisy flowers with orange overtones, gold eyes and a purple ring rising above the foliage from early summer to mid fall. Its attractive small succulent narrow leaves are grayish green in color. As an added bonus, the foliage turns a gorgeous burgundy in the fall.

Landscape Attributes

Fire Spinner Ice Plant is an herbaceous evergreen perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Fire Spinner Ice Plant is recommended for the following landscape applications;

- Border Edging
- General Garden Use

Planting & Growing

Fire Spinner Ice Plant will grow to be only 2 inches tall at maturity, with a spread of 18 inches. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
