Height: 6 feet

Spread: 12 inches

Sunlight: ○

Hardiness Zone: 4

Group/Class: Raymond Evison Group

**Description:**

A striking cultivar which is free flowering both in spring and late summer; large, violet-blue semi or double flowers with cream centers; a great repeat bloomer, perfect for arbors and containers

**Ornamental Features**

Chevalier Clematis features showy double violet star-shaped flowers with blue overtones, creamy white eyes and white stripes at the ends of the stems from early summer to early fall. Its compound leaves remain green in color throughout the season.

**Landscape Attributes**

Chevalier Clematis is an herbaceous perennial vine with a twining and trailing habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant. It is a Type 2 clematis, which means it will bloom primarily on old wood of the previous season, with a second flush later in summer. Dead and weak vines should be removed in late winter, and remaining vines should be trimmed back to the first buds that are seen to remove dead stems. It is a good choice for attracting hummingbirds to your yard. It has no significant negative characteristics.

Chevalier Clematis is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

**Planting & Growing**

Chevalier Clematis will grow to be about 6 feet tall at maturity, with a spread of 12 inches. As a climbing vine, it should either be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
