Longfellow's Greenhouses

Rose Marvel Meadow Sage

Salvia nemorosa 'Rose Marvel'

Plant Height: 10 inches

Flower Height: 14 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight: ○

Hardiness Zone: 4

Other Names: Perennial Salvia

Group/Class: Marvel Series

Description:

A bushy variety with stunning spikes of large, rich rose flowers that fade to reveal burgundy calyces, for extended garden color; long flowering, and re-blooms without cutting back; excellent for the sunny border or containers

Ornamental Features

Rose Marvel Meadow Sage has masses of beautiful spikes of rose flowers with burgundy calyces rising above the foliage from early summer to early fall, which emerge from distinctive hot pink flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its fragrant narrow leaves remain grayish green in color throughout the season.

Landscape Attributes

Rose Marvel Meadow Sage is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

(207) 622-5965

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Rose Marvel Meadow Sage is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Planting & Growing

Rose Marvel Meadow Sage will grow to be about 10 inches tall at maturity extending to 14 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
