Longfellow's Greenhouses

Jack Frost Bugloss

Brunnera macrophylla 'Jack Frost'

Plant Height: 12 inches

Flower Height: 16 inches

Spread: 18 inches

Spacing: 14 inches

Sunlight: ◐ ●

Hardiness Zone: 2

Other Names: Siberian Bugloss

Description:

A shade loving variety that features dark green, heart shaped leaves with a silver overlay that resembles lace; baby blue flowers emerge in the spring; fast growing mounded habit, great for use in containers, borders or as groundcover

Ornamental Features

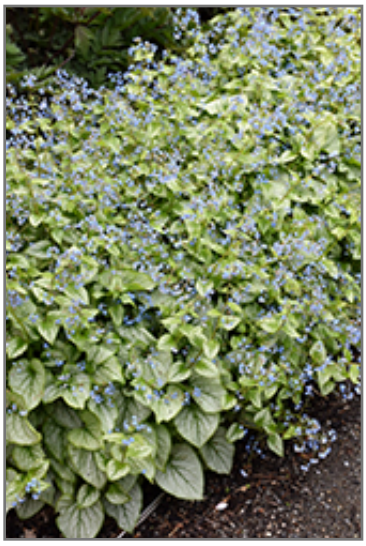

Jack Frost Bugloss features airy cymes of sky blue flowers with yellow eyes at the ends of the stems from early to late spring. The flowers are excellent for cutting. Its attractive heart-shaped leaves remain dark green in color with showy silver variegation throughout the season.

Landscape Attributes

Jack Frost Bugloss is an herbaceous perennial with a mounded form. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It has no significant negative characteristics.

Jack Frost Bugloss is recommended for the following landscape applications;

- General Garden Use
- Groundcover

Planting & Growing

Jack Frost Bugloss will grow to be about 12 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It requires an evenly moist well-drained soil for optimal growth. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
