Height: 6 feet

Spread: 24 inches

Sunlight: ○

Hardiness Zone: 4

Group/Class: Boulevard Series

Description:

This extraordinary, reblooming variety is very free flowering and hardy, producing large magenta-pink flowers with creamy centers from the ground up; perfect for garden walls, patios and containers; a great conversation piece

Ornamental Features

Boulevard Acropolis Clematis features showy fuchsia star-shaped flowers with creamy white eyes at the ends of the stems from late spring to early fall. Its compound leaves remain green in color throughout the season.

Landscape Attributes

Boulevard Acropolis Clematis is an herbaceous perennial vine with a twining and trailing habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant. It is a Type 3 clematis; each spring it should be pruned back to within a few inches of the ground, as it flowers on new wood of the season. It is a good choice for attracting hummingbirds to your yard. It has no significant negative characteristics.

Boulevard Acropolis Clematis is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Boulevard Acropolis Clematis will grow to be about 6 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it should either be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
