Longfellow's Greenhouses

SunSeekers® Salmon Coneflower

Echinacea 'IFECSSSAL'

Plant Height: 18 inches

Flower Height: 24 inches

Spread: 20 inches

Spacing: 18 inches

Sunlight: ○

Hardiness Zone: 4

Group/Class: SunSeekers Series

Description:

An outstanding series with eye catching color; strong and bushy habit that is ideal for sunny borders or containers; large and fragrant flowers have striking salmon pink petals with a hint of yellow, surrounding a crimson cone; deadhead spent blooms

Ornamental Features

SunSeekers Salmon Coneflower has masses of beautiful lightly-scented semi-double salmon daisy flowers with yellow overtones and crimson eyes at the ends of the stems from early summer to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its pointy leaves remain green in color throughout the season.

Landscape Attributes

SunSeekers Salmon Coneflower is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

SunSeekers Salmon Coneflower is recommended for the following landscape applications;

Planting & Growing

SunSeekers Salmon Coneflower will grow to be about 18 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 20 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
