Plant Height: 3 feet

Flower Height: 4 feet

Spread: 4 feet

Spacing: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 3

Other Names: Heart-leaved Aster, Broad-leaved Aster

Description:

Masses of light blue, daisy-like flowers, over broad, heart-shaped green foliage, adds a pop of color to autumn days; its well branched, bushy habit is ideal for borders or garden beds; beautiful when added to fresh cut arrangements; low maintenance

Ornamental Features

Blue Wood Aster has masses of beautiful silvery blue daisy flowers with buttery yellow eyes at the ends of the stems from late summer to late fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its large serrated heart-shaped leaves remain dark green in color throughout the season.

Landscape Attributes

Blue Wood Aster is a dense herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Blue Wood Aster is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Blue Wood Aster will grow to be about 3 feet tall at maturity extending to 4 feet tall with the flowers, with a spread of 4 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 3 feet apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America. It can be propagated by division.
