Pinky Pollen Ring™ Hydrangea

Hydrangea arborescens 'Pinky Pollen Ring'

Height: 5 feet

Spread: 5 feet

Sunlight: ○ ◐

Hardiness Zone: 3

Description:

A hardy, showy shrub which features large, light pink lacecap blooms in mid summer, lasting for a long time; best if treated like a perennial and pruned to a few inches from the ground in spring, blooms on new growth; requires little care

Ornamental Features

Pinky Pollen Ring Hydrangea has masses of beautiful pink lacecap flowers with white overtones at the ends of the branches from late spring to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. It has forest green deciduous foliage. The heart-shaped leaves do not develop any appreciable fall color.

Landscape Attributes

Pinky Pollen Ring Hydrangea is a multi-stemmed deciduous shrub with a more or less rounded form. Its strikingly bold and coarse texture can be very effective in a balanced landscape composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Pinky Pollen Ring Hydrangea is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Pinky Pollen Ring Hydrangea will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achive its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
