Height: 8 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ○ ◐

Hardiness Zone: 2

Other Names: Lambs Ears

Description:

A flowerless variety of lamb's ear for those who are looking for the silvery ground cover effect without the copious bees, however can get a rare bloom; spreads faster than other cultivars so prepare to contain it

Ornamental Features

Silver Carpet Lamb's Ears' attractive large tomentose oval leaves emerge silver in spring, turning grayish green in color throughout the season on a plant with a spreading habit of growth.

Landscape Attributes

Silver Carpet Lamb's Ears is a dense herbaceous perennial with a ground-hugging habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a high maintenance plant that will require regular care and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Silver Carpet Lamb's Ears is recommended for the following landscape applications;

81 Puddledock Rd
Manchester, ME 04351
(207) 622-5965

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Silver Carpet Lamb's Ears will grow to be about 8 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to dry locations, and dislikes excessive moisture. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
