Height: 28 inches

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 3

Description:

Large clusters of larger than normal pale lavender-pink flowers densely cover this catmint, hiding the glossy dark green foliage of these mounding plants

Ornamental Features

Candy Cat Catmint has masses of beautiful spikes of lightly-scented lavender flowers rising above the foliage from early to mid summer, which emerge from distinctive rose flower buds, and which are most effective when planted in groupings. Its attractive small glossy pointy leaves remain dark green in color throughout the season.

Landscape Attributes

Candy Cat Catmint is a dense herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Candy Cat Catmint is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Planting & Growing

Candy Cat Catmint will grow to be about 24 inches tall at maturity, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
