Longfellow's Greenhouses

Golden Mop Falsecypress

Chamaecyparis pisifera 'Golden Mop'

Plant Height: 3 feet

Flower Height: 7 feet

Spread: 6 feet

Sunlight: ○ ◐

Hardiness Zone: 4

Other Names: Japanese Falsecypress, Sawara Falsecypress

Description:

A variety of threadleaf falsecypress with fine, almost string-like golden foliage all season long, giving an extremely fine texture; a compact variety, ideal for color and texture contrast in the garden

Ornamental Features

Golden Mop Falsecypress is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has attractive yellow evergreen foliage which emerges gold in spring. The threadlike sprays of foliage are highly ornamental and turn lime green in the fall, which persists throughout the winter.

Landscape Attributes

Golden Mop Falsecypress is a multi-stemmed evergreen shrub with a more or less rounded form. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a high maintenance shrub that will require regular care and upkeep. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Longfellow's Greenhouses

Golden Mop Falsecypress is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Golden Mop Falsecypress will grow to be about 3 feet tall at maturity extending to 7 feet tall with the flowers, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
