Bianca Ornamental Golden Hops - New For 2026!

Humulus lupulus 'Bianca'

Height: 20 feet

Spread: 3 feet

Sunlight: ○

Hardiness Zone: 3

Description:

A vigorous ornamental climber with cone-shaped clusters of yellowish-green fruit; foliage emerges chartreuse and matures to light-green; tough and adaptable, use as a screen or quick cover; needs structural support; cut to the ground in spring

Ornamental Features

Bianca Ornamental Golden Hops is primarily grown for its highly ornamental fruit. It produces abundant clusters of yellow hop-like fruit from mid summer to mid fall. It attractive tomentose lobed leaves emerge chartreuse in spring, turning lime green in color throughout the season. The brick red stems can be quite attractive.

Landscape Attributes

Bianca Ornamental Golden Hops is a dense herbaceous perennial vine with a twining and trailing habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a high maintenance plant that will require regular care and upkeep, and can be pruned at anytime. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Invasive

Bianca Ornamental Golden Hops is recommended for the following landscape applications;

- Hedges/Screening
- Naturalizing And Woodland Gardens

Planting & Growing

Bianca Ornamental Golden Hops will grow to be about 20 feet tall at maturity, with a spread of 3 feet. As a climbing vine, it should either be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
